Year 13 PHYSICS Revision Timetable - Year 13 Mock Exams wb 5th January 2026

Pupil Name:

We will be asking you to revise different topics and sometimes the associated required practical. You SHOULD be making revision notes. Remember good revision involves doing something active, not just passively reading your notes or a website.

There are lots of activities you can do that will help you revise: make summary notes, produce a mind map, revision clock or flashcards, complete the Kerboodle text book practice papers, re-do the end of unit tests from year 1 or do past exam papers.

THE EXAM - You will sit 2 papers:

PAPER 1: 85 marks, 2 hours, chapters 1-13, 17 & 18

PAPER 2: 85 marks, 2 hours, chapters 1-13, 17-22, 26, 27 (ie NOT 23-25 or astrophysics)

USEFUL RESOURCES

Sharepoint:

Within the Physics A level resources folder:

- Revision notes for every topic
- Study notes for all units
- Support notes and tasks for most topics
- Stretch and challenge notes and tasks for most topics
- Kerboodle EUT and exam style questions for each topic (plus mark schemes)
- Answers to the practice questions at the end of each chapter of your Kerboodle text book
- Past exam questions and answers grouped by topic (plus mark schemes)
- Revision podcasts for most topics

Useful revision websites:

Guide to spreading out your revision in order to cover all topics to be assessed:

Week wb	What to revise	Type of revision notes and testing?	Any problems? (questions to ask your teacher?)
1 17/11/25	Chapters 1, 2 & 3 Measurement and errors		
2 24/11/25	Chapters 6, 7, 8, 9 & 10 Required practical 3		
3 01/12/25	Chapters 4 & 5 Required practicals 1 & 2		
4 08/12/25	Chapters 11, 12 & 13 Required practicals 4, 5 & 6		

5 15/12/25	Chapters 17, 18, 19 & 20 Required practical 7 & 8	
6 22/12/25	Chapters 26 & 27 Required practical 12	
7 29/12/25	Chapters 21 & 22 Measurement and errors	

REQUIRED PRACTICALS (Crossed out are the practicals you have not yet undertaken)

1 Investigation into the variation of the frequency of stationary waves on a string with length, tension and mass per unit length of the string 2 Investigation of interference effects to include the Young's slit experiment and interference by a diffraction grating 3 Determination of g by a free-fall method 4 Determination of the Young modulus by a simple method 5 Determination of resistivity of a wire using a micrometer, ammeter and voltmeter 6 Investigation of the emf and internal resistance of electric cells and batteries by measuring the variation of the terminal pd of the cell with current in it 7 Investigation into simple harmonic motion using a mass-spring system and a simple pendulum 8 Investigation of Boyle's (constant temperature) law and Charles's (constant pressure) law for a gas 9 Investigation of the charge and discharge of capacitors. Analysis techniques should include log-linear plotting leading to a determination of the time constant RC 10 Investigate how the force on a wire varies with flux density, current and length of wire using a top-pan balance 11 Investigate, using a search coil and oscilloscope, the effect on magnetic flux linkage of varying the angle between a search coil and magnetic field direction 12 Investigation of the inverse-square law for gamma radiation	
diffraction grating Determination of <i>g</i> by a free-fall method Determination of the Young modulus by a simple method Investigation of the emf and internal resistance of electric cells and batteries by measuring the variation of the terminal pd of the cell with current in it Investigation into simple harmonic motion using a mass-spring system and a simple pendulum Investigation of Boyle's (constant temperature) law and Charles's (constant pressure) law for a gas Investigation of the charge and discharge of capacitors. Analysis techniques should include log-linear plotting leading to a determination of the time constant <i>RC</i> Investigate how the force on a wire varies with flux density, current and length of wire using a top pan balance Investigate, using a search coil and oscilloscope, the effect on magnetic flux linkage of varying the angle between a search coil and magnetic field direction	
4 Determination of the Young modulus by a simple method 5 Determination of resistivity of a wire using a micrometer, ammeter and voltmeter 6 Investigation of the emf and internal resistance of electric cells and batteries by measuring the variation of the terminal pd of the cell with current in it 7 Investigation into simple harmonic motion using a mass-spring system and a simple pendulum 8 Investigation of Boyle's (constant temperature) law and Charles's (constant pressure) law for a gas 9 Investigation of the charge and discharge of capacitors. Analysis techniques should include log-linear plotting leading to a determination of the time constant RC 10 Investigate how the force on a wire varies with flux density, current and length of wire using a top pan balance 11 Investigate, using a search coil and oscilloscope, the effect on magnetic flux linkage of varying the angle between a search coil and magnetic field direction	,
